

INTRODUCING

EZ FEED™

EZ FEED™ is a finishing feeder for a lactating sow. Your lactating sows will be on true “Full Feed”. This is ideal for weaning pig weights and, just as important, the condition of your sows. If a sow is on full feed, she will stay in condition allowing for better wean to breed intervals resulting in less nonproductive sow days. The 25 lb. hopper is designed for easy viewing of feed levels from one end of the alleyway saving you time. When adjusted correctly, there is no spoiled feed in the feeder, so less labor is used for feeding sows, allowing more time to take care of baby pigs. EZ FEED™ is extremely durable and lightweight; cleaning and disinfecting is fast and easy; priced affordably and easy to install or retrofit.

EIP Manufacturing can also make new doors to fit any crate design to accommodate EZ FEED™ feeders. Call 1-800-942-2226 today for pricing!
